

# AutoGraph Dealer Image Syndication

If your dealership uses an Inventory Provider (Homenet, vAuto, FirstLook, NetLook, Dealer Specialties, Redline, Dealer Socket, NetLook, Max Digital, etc), to pass images to your website, an integration must be set up to between your Provider and eVN in order to receive images. Note: This integration will also allow you to syndicate your images to other sites of your choice (such as cars.com, Cargurus, Kijiji and AutoTrader). This can be done with a few simple steps (note there is no additional fee for this).

1) Fill out the information of your dealership's Inventory Provider and send it to [info@gmdealerdigital.ca](mailto:info@gmdealerdigital.ca)

- **Dealer Name and BAC:**
- **Inventory Provider:**
- **Contact Name at Inventory Provider (if known):**

2) Once this form is received your Inventory Provider will be contacted by eVN to start the feed integration. You will be copied on that communication because the Inventory Provider will need your approval to set this up.

3) Upon confirmation from the Inventory Provider that the integrations points are set, the new vehicle VINs requested by GM and delivered by eVN should start to appear in your dealer's Inventory Provider system within 48 hrs.
